

Are Your Company's IT Assets Falling Behind on Critical Patch Updates?

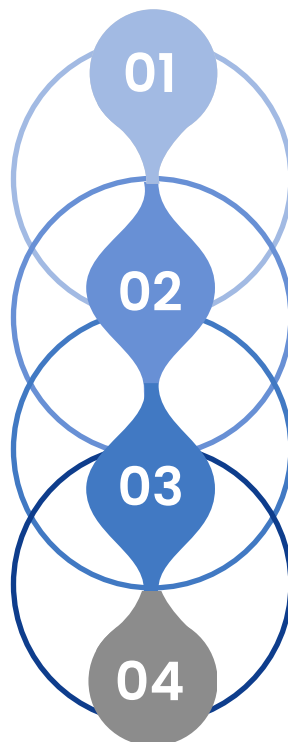

Unpatched systems are one of the easiest ways in for attackers to compromise your organisation's defences. Without real-time tracking and control, even a single missed update can put critical infrastructure at risk.

The Real-World Cost of Missed IT Patches

What Happens When Patching Updates Are Skipped

- **Security Gaps**
Known vulnerabilities stay active on endpoints when patches are delayed.
- **Unexpected Downtime**
System crashes and delays disrupt daily operations and reduce productivity.
- **More Pressure on IT**
Teams end up fixing preventable issues instead of focusing on priorities.
- **Audit Trail Gaps**
Lack of proper patch tracking makes compliance checks harder to pass.

Experience a New Level of Efficiency and Security with IPM+

- **Automate Routine Work**
Detect OS & application vulnerabilities, and generate patches – all in real time.
- **Patch Without Slowing Down**
Run updates during off-hours and control bandwidth to avoid disruption.
- **Gain Real-Time Visibility**
Track patch status live and fix issues instantly – without switching tools.
- **Stay Audit-Ready by Default**
Create detailed reports with role-based access and custom filters.

Industries It Caters To

- | | |
|--|---|
| ☒ Enterprise & IT | ☒ Media |
| ☒ Finance & BFSI | ☒ Government |
| ☒ Healthcare | ☒ Non-Profits |
| ☒ Manufacturing & Retail | ☒ Real Estate |

Trusted By

With 40+ Features, IPM+ is the All-in-One Solution for Patching, Visibility, and Compliance

IPM+ Patch Management Solution helps IT teams maintain control, reduce manual work, and respond faster to threats or system needs.

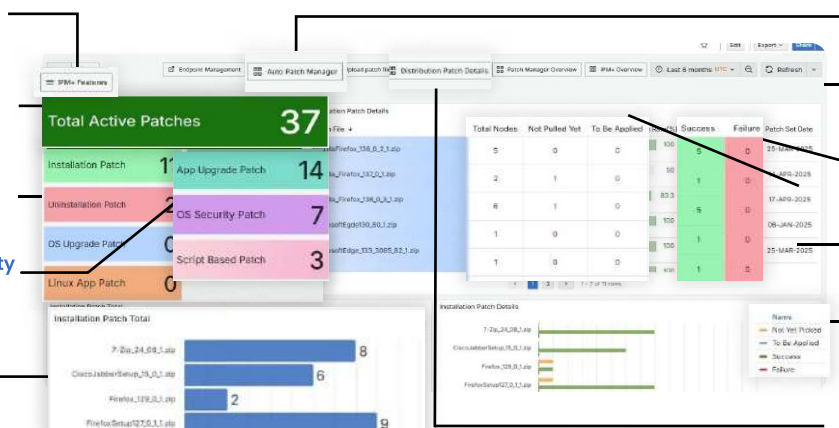

Test Patches Safely in a Sandbox

Vulnerability Scanning and Priority-Based Fixes

Installation Breakdown Across Patch Types

OS, Security, and Third-Party Patch Deployment

File-Level Patch Insights

Update/Patch Scheduling During Off-Hours

Create Custom Reports With Flexible Dashboards

Spot Missing or Failed Patches Quickly

Route Updates Through Approval Workflows

Real-Time Progress Tracking

Support Large Deployments With Distribution Points

These are just a few of the 40+ capabilities built into IPM+ Patch Management.

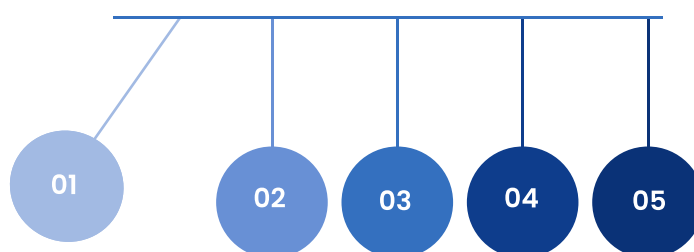

Works with Windows & Linux

Security at the Core of Every Patch

IPM+ includes proactive vulnerability scanning, patch creation, sandbox testing, and auto-remediation - so every patch is **verified**, **secured**, and **controlled**.

Why IPM+ Stands Out

- Remote agent deployment
- Real-time patch alerts
- Role-based access control
- Built-in PostgreSQL
- Sandbox testing support
