

How Prepared Are You To Recover From Data Loss Across Your Company's Endpoints?

Most organisations think their data is safe until a stolen laptop or ransomware attack proves it isn't. Without proper endpoint backup, there's no clean or quick way to recover from such a situation.

What Could Go Wrong Without Endpoint Backup?

59%
of ransomware victims pay the ransom

No backup means no fallback. Many companies are forced to pay in the absence of a plan-B.

21
days of downtime, on average

Recovery after a data loss incident can stall business operations for weeks.

35%
of organisations never recover lost data

Deleted or corrupted data files are often gone for good, with no chances of recovery.

\$4.45
million is the average cost of a data breach

When endpoint data is exposed, the financial impact extends far beyond IT.

With IPM+ DataSync, Backing Up Doesn't Have to Be Complicated

IPM+ DataSync takes the guesswork out of endpoint data backup. With centralised policies, scheduled syncs, and secure restore options, it's how modern IT teams keep critical data protected across every corner of the organisation.

(For Both On-Premise & Cloud Platforms)

Manage Everything from One Place

Deploy backup policies across all endpoints from the central UEM console. Configure sync rules, filters, and schedules in a few clicks.

Keep Data Updated Without Interruptions

DataSync runs in the background at scheduled intervals, without interrupting users or slowing down devices.

Recover Files with Version Access

It's easy to restore deleted or modified files, including past versions, through manual or admin-triggered recovery.

Store Data Securely with Built-In Protection

Backups are encrypted, deduplicated, and protected from malware, whether stored on-premise or in the IPM+ Sovereign Cloud.

Industries It Caters To

Enterprise & IT

Telecommunication

Healthcare

Banking & BFSI

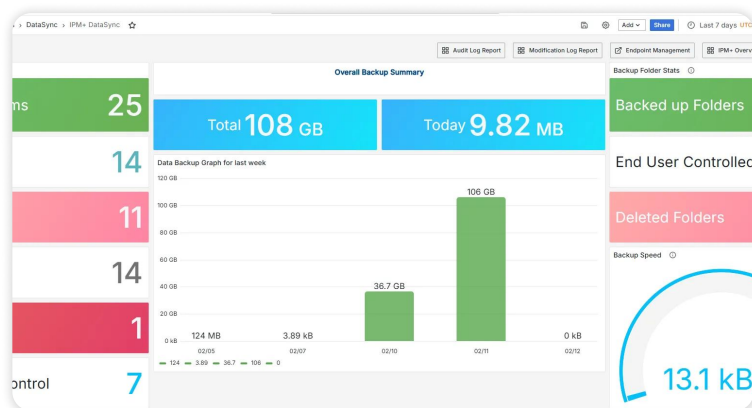

Government

SME

IPM+ DataSync is The Smarter Way to Back Up Laptops, Desktops, and Servers

Remote Deployment via UEM Console

Automated Scheduled Syncs

Web-Based Admin Dashboard

Manually Retrieve Data Backup Versions (for admins only)

Smart Sync Filters & Rules

Audit Logs for File Changes and Activity

Track Every Action, Error, and Change

Encrypted Storage with Malware Protection

Sync or Mirror Folder Options

Offline + Incremental Backup Support

Access Backup Folders Quickly & Easily

User-Level Sync Control

Only a fraction of all the features that make IPM+ DataSync enterprise-ready.

Works with Windows & Linux

Why Teams Choose IPM+

01

Built for Tough Conditions

Supports low bandwidth, and complex environments without slowing down.

02

Secure by Design

Encrypts, deduplicates, and logs everything. Your data stays protected and audit-ready.

03

Unified Management

Manage laptops, desktops, servers, and VMs from a single, central console.

04

Granular User Control

Let end users control sync behaviour while still enforcing central policies.

05

Lowest TCO in the Industry

Minimises infrastructure, and admin effort to keep costs low.
